

# **GUI Workshop III**

## **SQL SERVER MONITORING**

**Dave Kelley and Eddy Cheung**

# OVERVIEW

## Summary and Context

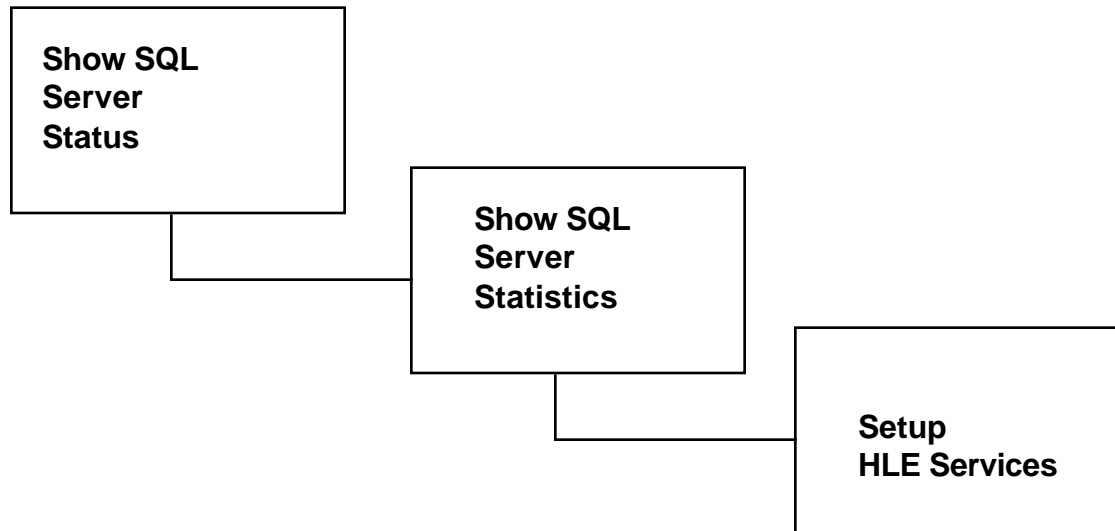

### **Summary:**

Using the Enterprise SQL Server Management (ESSM) we will briefly show some of the functionality associated with ESSM. Including general statistics about the SQL Server and the setting up of a High Level Event Service. The purpose of this script is to show the integration of a third party application with Tivoli. To show that you can monitor your SQL servers with the same GUIs that you use to monitor your system resources.

### **• Context**

- Within ESSM show the SQL Server Status
- Show some of the ESSM Statistics
- Show and schedule a High Level Event Service

# Process Flow

## Preconditions:

The Tivoli Management Environment has been previously configured to monitor some of the events that will be shown.

Tivoli is up and running on the console.

At least one SQL Server is being monitored.

## Steps:

| Step No. | Time | Player        | Activity  | GUI                                   |
|----------|------|---------------|---|---------------------------------------|
| 1        | 1000 | Fault Manager | Select the ESSM Policy Region Icon from the Administrators Desktop        | TME Desktop for Administrator dkelley |
| 2        | 1002 | Fault Manager | Select the Slimer_srvr Icon to monitor/manage the SQL server information. | ESSM Policy Region Window             |

|    |      |               |   |                                       |
|----|------|---------------|---|---------------------------------------|
| 3  | 1005 | Fault Manager | From the "Server" pull down menu the Fault Manager selects the "Status..." option.                                      | SQL Server Window                     |
| 4  | 1006 | Fault Manager | The Fault Manager views the status of the SQL Server. Can also Start, Stop, or Refresh the SQL Server from this Window. | SQL Server Status Window              |
| 5  | 1007 | Fault Manager | From the "Server" pull down menu the Fault Manager selects the "Statistics..." option                                   | SQL Server Window                     |
| 6  | 1008 | Fault Manager | The Fault Manager views the SQL Server Statistics.  | SQL Server Statistics Window          |
| 7  | 1010 | Fault Manager | The Fault Manager closes the windows and returns to the TME Desktop   | TME Desktop for Administrator dkelley |
| 8  | 1012 | Fault Manager | The Fault Manager double clicks on the ESSM Policy Region Icon  | TME Desktop for Administrator dkelley |
| 9  | 1015 | Fault Manager | Double click on the HLE_srvr icon to open the High Level Event Services Profile Manager window                          | ESSM Policy Region                    |
| 10 | 1017 | Fault Manager | Double click on the HLE_prof to open the Sentry Profile Properties window that is associated with the HLE Services.     | Profile Manager                       |

|    |      |               |   |                                      |
|----|------|---------------|---|--------------------------------------|
| 11 | 1020 | Fault Manager | From this window you can view the HLE's that are being monitored for the SQL servers.   | Sentry Profile Properties            |
| 12 | 1024 | Fault Manager | The Fault Manager clicks on the "Add Monitor..." Button (Since we already used this functionality above, this is just to show that the ESSM uses the Tivoli Sentry to monitor its events and that they are setup the same way.) | Add Monitor to Tivoli/Sentry Profile |
| 13 | 1026 | Fault Manager | For the percent of the CPU Busy event open the Edit Monitor button and modify the schedule that the event will be recorded.   | Edit Sentry Monitor                  |
| 14 | 1028 | Fault Manager | Select the "Set Monitoring Schedule" button to set the schedule in which the event will be monitored and select the Change & Close Button.  | Set Monitoring Schedule              |
| 15 | 1030 | Fault Manager | Select the "Change & Close" button.   | Edit Sentry Monitor                  |
| 16 | 1035 | Fault Manager | From the "Profile" pull down menu select save and then from the same pull down menu select distribute.  | Sentry Profile Properties            |

|    |      |               |   |                                       |
|----|------|---------------|---|---------------------------------------|
| 17 | 1038 | Fault Manager | Set the appropriate options and select the Subscribers on which to distribute and select the "Distribute & Close" button. | Distribute Profile                    |
| 18 | 1042 | Fault Manager | The Fault Manager Closes all of the open windows until he returns to the TME Administrators Desktop Window                | TME Desktop for Administrator dkelley |
